Illuminated Coat Rail

The illuminated coat rail is a functional coat rail that also provides lighting directly over the clothing, avoiding shadows created from shelving above or anyone standing in front of the rails. With next to zero glare and the ability to be dimmed it creates a comfortable visual experience in dark conditions such as late at night or early in the morning. With the tool free installation of the rail into the bracket, and the slide on bracket covers, fitting is simplified.

Chrome plated covers to hide mounting brackets.

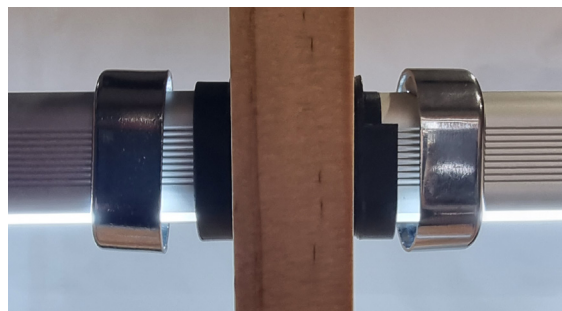

No tools are required to install rail into bracket.

Custom-made to length anodized aluminum extrusion with a 3mm wall thickness for a strength well above the industry standard.

Carbon fibre composite mounting brackets and end caps are light-weight and strong, making them ideal for marine and auto industries.

Through wall adaptor to link multiple rails in a row up to 4.5metres.

Available to fit any wall thickness. No extra power cable required.

- 24V DC
- 14W per metre for high output and safety.
- Dimmable LED strip available in 2700k, 3000k, 4000k & 5000k colour temperatures.
- Can be controlled by most home automation systems
- Dimensions: W= 14.5mm H= 30mm
- Maximum rail length: 3.0m
- Warranty: 3 Years
